Re: Vinotron Machine

I currently use the Vinotron Pasting Machine as part of a Vinyl Course. I am an Instructor at the Union Training Facility in Chicago. I was first introduced to the Vinotron Pasting Machine as an apprentice in 1977.

I am just as impressed with it today as I was 26 years ago. I consider it the leader in the industry when it comes to production. It can easily keep up with 12 hangers at a time with just one person operating it.

The Vinotron Machine is the only one that is really ergonomically correct. The reason is that the machine feeds you the sheets automatically and there is no tug of war on your back.

Usually, I can have a student operating the Vinotron by themselves within less than one hour of instruction. I have had Contractors call and inquire as to whether or not it would be worth purchasing one. My reply is yes. It is a definite money maker. The Vinotron is one of those investments that will pay for itself over and over.

Sincerely,

James C. Watte
